

Meet our new utilization management tool, SimiTree Compass

Optimizing Visit Utilization and Resource Management for Home Health Agencies.

Let us show you the way.

Get data-driven insights for your home health agency's care planning and resource management decisions with SimiTree Compass, our visit utilization guidance. Our utilization data helps you make informed decisions, provide consistent care, and ensure appropriate documentation. Learn more about all the data that is available as part of the system, including standard visit ranges, LUPA likelihood, and visit discipline mix.

Information when and how you need it.

We present our data in a format aligned with how clinicians and managers think about the delivery of care. You can access feedback earlier in the patient's episode with just a couple of patient characteristics, rather than waiting for the OASIS to be fully locked.

Easy, clear, and vendor-neutral data presentation.

Regardless of your agency's EMR, with just a few clicks, you can easily look up utilization data specific to your patient's clinical profile for care periods, certification episodes, or complete cases of care. You can also adjust and set parameters to best meet your agency's needs. You don't have to adapt your processes to meet our format.

Easily access data on industry-standard delivery of care specific to patients' profiles.

- Data specific to care planning decision support, including:
 - Likelihood of a second care period or episode.
 - Likelihood of a low utilization payment adjustment.
 - National standard visit levels by discipline, and more.
- Select only your patient's HHRG or clinical group and source/timing at admission and receive detailed feedback on utilization patterns standards for similar patients.

SIMITREE COMPASS Visit Guidelines			
Clinical Group		Source/Timing	
MS Rehab		Early - Institutional	
Update			
By Care Period Sequence			First 60-Day Cert Period
	1st Care Period	2nd Care Period	1st 60-Day Cert Period
Likelihood		65%	
LUPA Rate	11%	10%	
	Range of Non-LUPA Utilization		Utilization Range
Total	10 - 12	10 - 13	Total 12 - 18
SN	3 - 5	3 - 5	SN 3 - 6
PT	7 - 8	7 - 8	PT 8 - 10
